### 3-Month / YTD Review

- Outperformance was primarily driven by security selection.
- Consumer discretionary was the strongest sector for stock selection.
- Not owning certain underperforming stocks significantly contributed to results.
- Sector allocation was mixed, with positive impact from underweighting information technology and overweighting health care, partially offset by negative impact from no energy exposure and an overweight to consumer discretionary.

### Current Positioning

- The fund is underweight emerging markets and overweight the U.S.
- Holdings currently indicate a modest bias toward growth over value with a higher than market P/E ratio and lower than market dividend yield.
- Sector allocations include a meaningful overweight to consumer discretionary and an underweight to financials.
- The fund is positioned for long term economic growth at reasonable prices.
