All attribution is based on gross portfolio performance.

Asset Allocation/Interaction Effect [AAE]:

Quantifies the performance effect of differences in actual asset allocation weights of the Series relative to the target weights of the blended benchmark. As mentioned previously, the magnitude of cashflows and market volatility will have an impact on results.

Strategy Selection Effect [SSE]:

Quantifies the value-add of the underlying strategy benchmarks (e.g. R1000V) relative to the Risk Reducing and Return Seeking broad benchmarks (e.g. R3000).

Manager Selection Effect [MSE]:

Quantifies how CBIS' manager selection and pairing combination within each sub-strategy (e.g. International Fund) has added value relative to the corresponding sub-strategy benchmark (e.g. MSCI ACWI ex US).

12-Month Performance

- The Fund significantly outperformed the benchmark.
- AAE was slightly positive, lending credence to our rebalancing methodology.
- SSE was positive, with strong contributions from small cap equities, both domestic and international. Risk-Reducing strategies added slightly, while domestic core equities were a net detractor throughout the year, given the overall strong equity market.
- MSE was positive, with strong contributions from the Risk-Reducing portion of the portfolio. Strong International Small Cap performance relative to their benchmark also contributed.

3-Month Performance

- Fund performed slightly better than the benchmark
- AAE was negligible, as we maintained target allocations throughout the quarter
- SSE was slightly positive. Domestic core equities and international small cap equities drove positive performance, domestic small cap securities were a detractor over the period.
- MSE was slightly positive. International Equity's outperformance drove the positive impact.
