Performance data quoted represents past performance and does not guarantee future results. The investment return and principal value of an investment will fluctuate so that an investor's shares, when redeemed, may be worth less than their original cost and current performance may be higher or lower than the performance quoted. For performance current to the most recent month end, please visit our website at www.cbisonline.com or call 1-866-348-6466.

Indices are unmanaged and do not include the effect of fees. One cannot invest in an index.

Performance data shown prior to 12/03/2021 is that of the funds of the Catholic United Investment Trust (the "Predecessor Funds"). The Predecessor Funds were managed by the Adviser using investment objectives, strategies, policies and restrictions that were in all material respects equivalent. The performance information has been adjusted to reflect Fund expenses which may result in higher or lower performance.

ATTRIBUTION

	12-MONTH	3-MONTH
Duration	1.18	0.96
Curve	0.93	0.61

12-Month Review

- The Fund outperformed the benchmark due to a strong contribution from the Merger Arbitrage allocation.
- The overall duration posture had a positive impact.
- Curve positioning was also positive for the period, particularly in the Treasury holdings.
- Sector allocation had a negative impact on relative performance as allocations to non-index non-Treasury sectors such as ABS and CMBS detracted.
- Security selection within the fixed income allocation was neutral, with positive results in Industrials offsetting the negative impact of selection in other sectors.

3-Month Review

- The Fund benefitted from a continued strong performance in the bond portfolio. The Merger Arbitrage allocation contributed with positive relative returns.
- Duration and yield curve positioning were the primary drivers of outperformance
- Sector allocation had a negative impact on relative performance as exposure to ABS and CMBS detracted.
- Security selection was negative. Specific holdings within the Financials holdings accounted for much of the negative security selection results.
- The Merger Arbitrage portfolio had a negative return, but the magnitude of the loss was much less than the returns from the bond portfolio.

Current Positioning

- Effective Duration is slightly longer than the benchmark.
- Sector exposure emphasizes corporates and securitized, which is supported by a continued underweight to Treasuries.
- Allocation to high yield securities is held in BB and B credit buckets.

Before investing you should carefully consider the new Funds' investment objectives, risks, charges and expenses. This and other information is available in the prospectus, or summary prospectus. Please read the prospectus carefully before you invest. The prospectus, or summary prospectus, can be obtained by calling 1-866-348-6466.

Mutual fund investing involves risk, including possible loss of principal. There can be no assurance that the Fund will achieve its stated objectives. Current and future holdings are subject to risk. Bonds and bond funds are subject to interest rate risk and will decline in value as interest rates rise. Bonds and bond funds generally decrease in value as interest rates rise. Mortgage-backed securities are subject to prepayment and extension risk and therefore react differently to changes in interest rates than other bonds. Small movements in interest rates may quickly and significantly reduce the value of certain mortgage-backed securities. There is no guarantee that the Fund's income will be exempt from federal or state income taxes. Capital gains, if any, are subject to capital gains tax. Bonds and bond funds will decrease in value as interest rates rise. Income from municipal bonds may be subject to the alternative minimum tax. An investment in the fund(s) is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency.

Effective Duration is a calculation for bonds with embedded options. Effective duration takes into account that expected cash flows will fluctuate as interest rates change.

Yield Curve a graph in which the yield of fixed-interest securities is plotted against the length of time they have to run to maturity.

The Bloomberg 1-5 Year Government Credit Index is a broad-based benchmark that measures the non-securitized component of the U.S. Aggregate Index.
